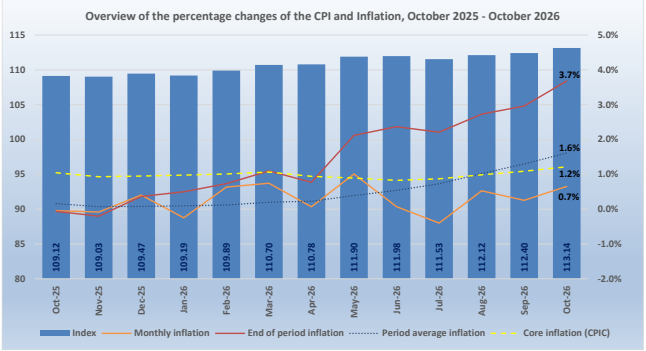
109.25 vs 111.01
1.6%
(24 months)

Consumer Price Index for the month of
October 2026

The CPI for October 2026 (113.14) increased by 0.7% compared with the index for September 2026 (112.40).
The 12-month percentage change in the CPI (October 2025 to October 2026) is 3.7%, representing an increase of 3.8 percentage points (ppts) compared with the corresponding period a year earlier (-0.1%).
The average percentage change in the CPI over the last 24 months, based on the 12-month periods October 2024 to October 2025 and October 2025 to October 2026, is 1.6%. This represents an increase of 1.4 ppts compared with the average change of 0.2% recorded for the preceding 24-month period, based on the 12-month periods October 2023 to October 2024 and October 2024 to October 2025.

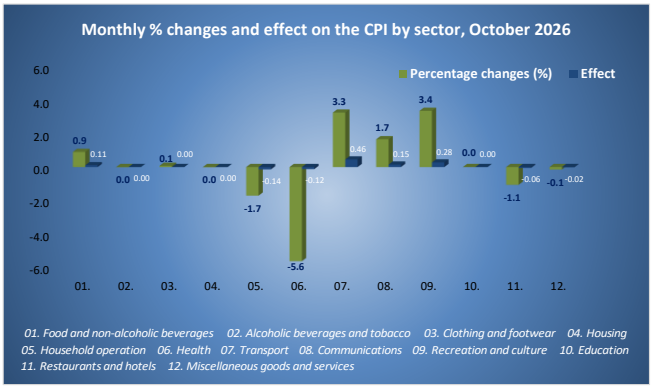


During October 2026, five (5) of the twelve (12) sectors recorded price increases. The sectors with the largest impact on the CPI were "Transport" (3.3%), "Recreation and culture" (3.4%), and "Communications" (1.7%), contributing 0.46, 0.28, and 0.15 ppts, respectively. The remaining two sectors that recorded price increases contributed a combined 0.11 ppts to the CPI in October 2026.

These increases were partially offset by declines in the indices for the "Household operation" (-1.7%) and "Health" (-5.6%) sectors, which contributed -0.14 and -0.12 ppts, respectively to the CPI. The remaining four sectors that recorded price decreases contributed a combined -0.08 ppts to the CPI in October 2026.

The increase in the "Transport" sector was driven by a 4.9% increase in the category "Operation of personal transport equipment", contributing 0.45 ppts to the CPI. The increase in the "Recreation and culture" sector was mainly due to a 5.2% increase in the category "Other recreational items and equipment; gardens and pets", contributing 0.13 ppts to the CPI. The increase in the "Communications" sector was due to an 18.8% increase in the category "Telephone and telefax equipment", contributing 0.15 ppts to the CPI.

The decline in the "Household operation" sector was primarily driven by an 8.6% decrease in the category "Household appliances", which contributed -0.16 ppts to the CPI. The decline in the "Health" sector was mainly due to a 7.4% decrease in the category "Medical products, appliances and equipment", which contributed -0.11 ppts to the CPI.



Consumption basket

The CPI consumption basket consists of 408 goods and services. Compared with September 2026, 46.3% of these products increased in price, contributing 1.36 ppts to the CPI, while 36.8% decreased in price, contributing -0.71 ppts. The remaining 16.9% showed no price change. Compared with September 2026, the prices of goods (0.7%) and services (0.6%) increased, contributing 0.42 ppts and 0.23 ppts, respectively, to the CPI in October 2026.

CPI (BASE JUN 2019 = 100)		October-2026								CPIC			SUBSISTENCE LEVEL

Press Release: Consumer Price Index October 2026

Core inflation

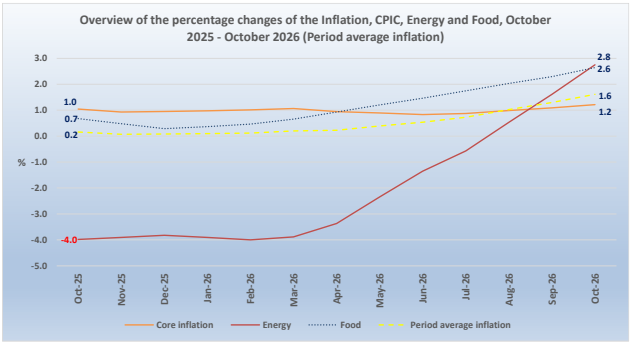
The CPIC (Core Consumer Price Index), which excludes the effects of energy and food, is calculated by comparing the average index of the most recent 12-month period with the average index of the preceding 12-month period (period average). In October 2026, the CPIC increased by 1.2%. Over the same period, the energy index, comprising electricity, water, gasoline, and diesel, increased by 2.8%, while the food index increased by 2.6%.

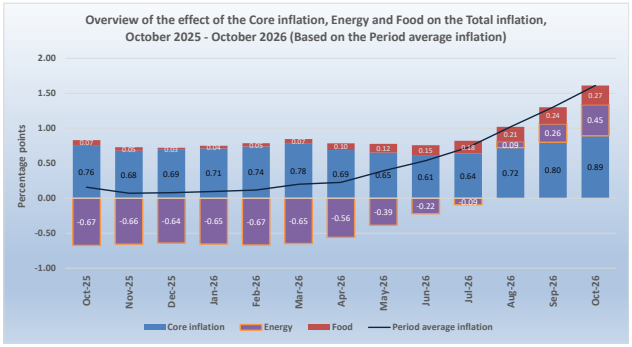
What is CPIC?

The CPIC (core inflation) is a portion of the inflation where certain items, which have volatile price movements, are excluded, such as food products and energy. When calculating the core inflation, the most volatile components are eliminated from the inflation. The core inflation index is used to assess the medium and long-term trends of the general level of prices. For purposes of economic policymaking, especially monetary policy, many economists focus on the proportion of the core inflation, as this allows a more in-depth evaluation of the recent inflation developments in the economy.

The three main uses of a CPI are:

1. *a calculation method to compensate employees due to the loss of purchasing power, adjusting their salaries, with the percentage change rate of the CPI, which is known as indexation.*
2. *a tool used in National Accounts to adjust components of the gross domestic product (GDP) from nominal terms to real terms. (For example, by eliminating the effect of the price changes from the consumption value)*
3. *a means commonly used by governments and central banks to set inflation targets.*





Subsistence level

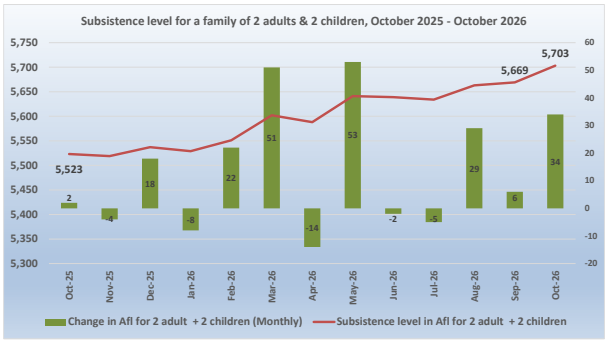
The subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14) in October 2026 was Afl. 5,703, an increase of Afl. 34 compared to September 2026 (Afl. 5,669). The subsistence level for a single-adult household was Afl. 2,716, an increase of Afl. 16 compared to September 2026 (Afl. 2,700).

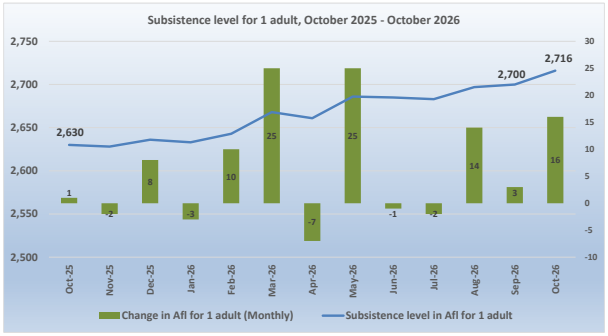
What is the Subsistence level and how is it adjusted?

The CBS defines the subsistence level as the minimum level of income that is perceived as necessary for a person or family to be able to function in the society in an adequate and socially acceptable manner. When the definition of subsistence level is used, it refers in reality to a "Social subsistence level" and not the literal definition "the money needed to purchase those goods and services deemed necessary for living a life free of basic deprivation" (United Nations).

A subsistence level index was created by calculating the cost of the essential resources that an average adult consumes during a month. Each month this index is adjusted, based on the prices of food, clothing, shelter, transportation, and other items in the basket.

The current subsistence level is based on the "Subsistence level 2010" report published by the CBS in December 2010, and is updated monthly according to the CPI. The reference unit used in this report is of a household consisting of two adults and two children (aged 0-14). The total weight of such a household is 2.1 (1.0 + 0.5 + 0.3 + 0.3).





- *Figures have been rounded for clarity. Minor discrepancies may exist between individual values and their aggregated totals. These differences do not affect the overall accuracy or integrity of the data.*
- *Certain product groups are subject to frequent changes in models, quality, or specifications, which limits strict item-to-item price comparability over time. Product replacement is therefore applied in line with internationally accepted CPI methodology to maintain representativity and relevance. For a more detailed explanation, reference is made to the ACPI Methodology Statement on our website (www.cbs.aw).*

The subsistence level in *October 2026*

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. It is typically determined by estimating the cost of all essential goods and services consumed by an average adult over a specified period. This measure is commonly referred to as a basic needs index and varies according to the prices of food, clothing, housing, transport, and other items included in the consumption basket. Equivalence scales are used to adjust the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14). The subsistence level is based on the figures presented in the report "*Bestaansminimum 2010"* and is updated monthly for inflation using the CPI. The reference unit used in this report is a household consisting of two (2) adults and two (2) children (aged 0-14).

In October 2026, the monthly subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14) was Afl. 5,703, an increase of Afl. 180 compared with October 2025 (Afl. 5,523). This increase was mainly driven by rises of Afl. 101 and Afl. 51 in the sectors "Food and non-alcoholic beverages" and "Transport", respectively. The largest decreases were recorded in the sectors "Household operation" (Afl. -5) and "Clothing and footwear" (Afl. -5).

Table 1 Monthly subsistence level in Aruba (in Afl.) by sector for a family of 2 adults and 2 children (aged 0-14)

October 2025 vs October 2026

Source: Central Bureau of Statistics Aruba

Note: The sectors "Alcoholic beverages and tobacco" and "Restaurants and hotels" are not included in the calculation of the subsistence level, because its purpose is to represent the minimum cost of the essential goods and services necessary to maintain an adequate standard of living.

Source: Central Bureau of Statistics Aruba

In October 2026, the monthly subsistence level for a single-adult household was Afl. 2,716, resulting in an income deficit of Afl. 709. This represents an increase of Afl. 65 compared with the deficit recorded one year earlier (Afl. 644). This deficit is the second highest recorded for the month of October over the past six (6) years.

For clarification, we have added two columns to Table 3: (1) the income supplement ("*reparatietoeslag*"), which provides additional support to eligible workers; and (2) the estimated income deficit, which is reduced by this supplement, thereby improving the financial position of minimum-wage earners.

The current approach will be maintained to ensure consistency and comparability.

Change in prices of crude oil, utilities, gasoline and diesel in October 2026

The prices of gasoline and diesel are largely influenced by international crude oil prices. In October 2026, the average price of crude oil increased to US$101.53 per barrel, up US$4.69 (4.8%) from September 2026, when the average price was US$96.84 per barrel.

The prices of electricity and water remained unchanged compared with September 2026. As a result, the average price of electricity per household remained at Afl. 263.67, while the average price of water per household remained at Afl. 168.73.

In October 2026, the price of gasoline increased by Afl. 0.206 (20.6 cents), or 7.1%, and contributed 0.38 ppts to the CPI. The price of diesel increased by Afl. 0.276 (27.6 cents), or 8.9%, contributing an additional 0.04 ppts to the CPI.

In October 2026, the combined category of utilities, gasoline, and diesel increased by 2.5% compared with September 2026, contributing 0.42 ppts to the CPI. Meanwhile, the remaining 404 goods and services increased by 0.3%, contributing 0.24 ppts to the CPI.

Change in prices of Food & Catering Services in *October 2026*

The "Food & catering services" index increased by 0.7% in October 2026, following a 0.2% increase in September 2026. The "Food at home" index rose by 0.9% in October, with eight (8) of its eleven (11) sub-indices recording increases. The largest increase was observed in the "Potatoes and other tubers" index (8.4%). Other notable increases were recorded in the indices for "Vegetables" (4.3%), "Fruit" (1.4%), and "Fish and other seafood" (1.2%).
The "Food products n.e.c." index recorded the largest decrease, declining by 0.2% in October 2026.

The "Food away from home" index recorded an increase of 0.1% in October 2026.

In October 2026, the combined indices of "Food at home" and "Food away from home" increased by 0.7% compared with September 2026 and contributed 0.11 ppts to the CPI. The remaining goods and services increased by 0.7% and contributed 0.54 ppts to the CPI.

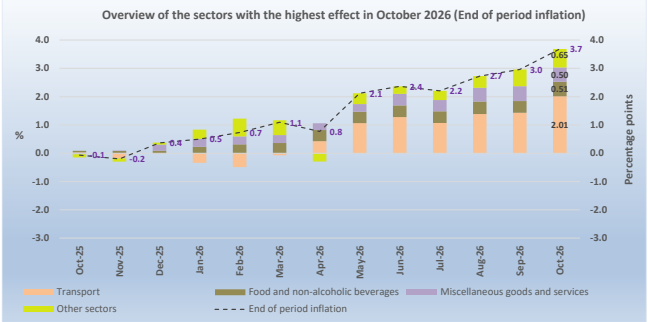
Note: "Food at Home" refers to the sector "Food and Non-Alcoholic Beverages", while "Food Away from Home" refers to the category "Catering Services".
These terms are used to simplify the presentation of the results.

- *Figures have been rounded for clarity. Minor discrepancies may exist between individual values and their aggregated totals. These differences do not affect the overall accuracy or integrity of the data.*
- *Certain product groups are subject to frequent changes in models, quality, or specifications, which limits strict item-to-item price comparability over time. Product replacement is therefore applied in line with internationally accepted CPI methodology to maintain representativity and relevance. For a more detailed explanation, reference is made to the ACPI Methodology Statement on our website (www.cbs.aw).*

CPI for the period
October 2025 – October 2026

Consumer Price Index

Over the last 12 months, the CPI increased by 3.7%. Nine (9) of the twelve (12) sectors recorded price increases. The sectors with the largest impact on the CPI were "Transport" (15.7%), "Food and non-alcoholic beverages" (4.3%), "Miscellaneous goods and services" (4.2%), "Communications" (5.2%), and "Recreation and culture" (3.9%), contributing 2.01, 0.51, 0.50, 0.46, and 0.33 ppts, respectively. The remaining four sectors that recorded price increases contributed a combined 0.31 ppts to the CPI over the period October 2025 to October 2026.



The aforementioned increases were partially offset by a 4.7% decrease in the "Household operation" sector, which contributed -0.40 ppts to the CPI over the period October 2025 to October 2026. The remaining sector that recorded a price decrease contributed -0.05 ppts to the CPI over the same period.

The increase in the "Transport" sector was mainly driven by a 23.4% increase in the category "Operation of personal transport equipment", which contributed 1.86 ppts to the CPI. The increase in the "Food and non-alcoholic beverages" sector was mainly driven by a 4.3% increase in the category "Food", which contributed 0.45 ppts to the CPI. The increase in the "Miscellaneous goods and services" sector was mainly driven by increases of 6.4% and 18.0% in the categories "Personal care" and "Personal effects n.e.c.", which contributed 0.26 ppts and 0.23 ppts to the CPI, respectively. The increase in the "Communications" sector was driven by a 92.5% increase in the category "Telephone and telefax equipment", which contributed 0.46 ppts to the CPI. The increase in the "Recreation and culture" sector was mainly driven by a 4.7% increase in the category "Other recreational items and equipment; gardens and pets", which contributed 0.13 ppts to the CPI.

The decrease in the "Household operation" sector was mainly driven by an 18.7% decrease in the category "Household appliances", which contributed -0.40 ppts to the CPI.

Consumption basket

Over the last 12 months, 57.6% of the products in the consumption basket increased in price, contributing 4.69 ppts to the CPI, while 30.4% decreased in price, contributing -1.00 ppts. The remaining 12.0% recorded no change in price. Prices of both goods (5.0%) and services (1.9%) increased, contributing 2.87 ppts and 0.81 ppts to the CPI, respectively.

Subsistence level

Over the last 12 months, the subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14) increased by Afl. 180, from Afl. 5,523 in October 2025 to Afl. 5,703 in October 2026. This increase was mainly driven by higher costs in the "Food and non-alcoholic beverages" (Afl. 101) and "Transport" (Afl. 51) sectors.

Change in prices of crude oil, utilities, gasoline and diesel

Over the last 12 months, the average price per barrel of crude oil increased by US$40.49 (66.3%), rising from US$61.04 in October 2025 to US$101.53 in October 2026.

The energy index increased by 11.1% over the past 12 months, contributing 1.78 ppts to the CPI. The indices for "Gasoline" (36.6%) and "Diesel" (68.8%) also increased over the same period, contributing 1.58 ppts and 0.21 ppts to the CPI, respectively. The indices for "Electricity" and "Water" remained unchanged and therefore had no effect on the CPI. Meanwhile, the remaining 404 goods and services, as a group, increased by 2.3% and contributed 1.90 ppts to the CPI.

Change in prices of Food & Catering Services

Over the last 12 months, the "Food & catering services" index increased by 3.9%. The "Food at home" index increased by 4.3%, as all of the eleven (11) food groups within this category registered price increases during this period.

The "Fruit" index increased by 8.9%, representing the largest increase among the "Food at home" food groups. Other notable increases were recorded in the indices for "Vegetables" (8.1%), "Meat" (6.3%), "Sugar, jam, honey and other confectionery" (5.6%), "Non-alcoholic beverages" (4.5%) and "Potatoes and other tubers" (4.2%).

The index for "Food away from home" increased by 2.8% over the last 12 months.

Over the last 12 months, the combined indices of "Food at home" and "Food away from home" increased by 3.9% and contributed 0.66 ppts to the CPI. The remaining goods and services increased by 3.6% and contributed 3.03 ppts to the CPI.

- *Figures have been rounded for clarity. Minor discrepancies may exist between individual values and their aggregated totals. These differences do not affect the overall accuracy or integrity of the data.*
- *Certain product groups are subject to frequent changes in models, quality, or specifications, which limits strict item-to-item price comparability over time. Product replacement is therefore applied in line with internationally accepted CPI methodology to maintain representativity and relevance. For a more detailed explanation, reference is made to the ACPI Methodology Statement on our website (www.cbs.aw).*

Source: Central Bureau of Statistics Aruba

The Period average (last 24 months) change is calculated by comparing the average index for the most recent 12-month period compared with the average index of the preceding 12-month period.

- *Figures have been rounded for clarity. Minor discrepancies may exist between individual values and their aggregated totals. These differences do not affect the overall accuracy or integrity of the data.*
- *Certain product groups are subject to frequent changes in models, quality, or specifications, which limits strict item-to-item price comparability over time. Product replacement is therefore applied in line with internationally accepted CPI methodology to maintain representativity and relevance. For a more detailed explanation, reference is made to the ACPI Methodology Statement on our website (www.cbs.aw).*

Note: The CPI for Low income and High income households is based on data from the Household Income and Expenditure Survey (HIES) 2016. Households were classified according to their gross monthly household income, using the median income of Afl. 3,558 as the threshold separating the Low-income and high-income groups. Therefore Low-income and High-income CPIs reflect the spending patterns of households within those income groups. The Total Population CPI is based on the expenditure patterns of all households combined. Consequently, inflation rates may differ across groups.

- *Figures have been rounded for clarity. Minor discrepancies may exist between individual values and their aggregated totals. These differences do not affect the overall accuracy or integrity of the data.*
- *Certain product groups are subject to frequent changes in models, quality, or specifications, which limits strict item-to-item price comparability over time. Product replacement is therefore applied in line with internationally accepted CPI methodology to maintain representativity and relevance. For a more detailed explanation, reference is made to the ACPI Methodology Statement on our website (www.cbs.aw).*
