

Consumer Price Index, base period June 2019

February 2026

The Central Bureau of Statistics presents the main findings for the Consumer Price Index (CPI) for the month of February 2026.

Consumer Price Index for the month of February 2026

The CPI for February 2026 (109.89) shows an increase of 0.6% compared to the index of January 2026 (109.19). The percentage change of the CPI over the last twelve (12) months (February 2025 to February 2026) is 0.7%, an increase of 0.2 percentage points (ppts) compared to the percentage change for the same period of last year (0.5%). The period average (last 24 months) percentage change of the CPI for the periods February 2024 to February 2025 and February 2025 to February 2026 is 0.1%, a decrease of 1.5 ppts compared to the period average percentage change over the periods February 2023 to February 2024 and February 2024 to February 2025 (1.6%).

During this month, ten (10) of the twelve (12) sectors registered increases in prices. The increases that had the greatest influence on the CPI were registered for the "Recreation and culture" (2.9%), "Household operation" (1.6%), "Transport" (0.8%), "Communications" (0.6%) and "Food and non-alcoholic beverages" (0.4%) sectors, which contributed respectively to an effect of 0.25, 0.14, 0.10, 0.05 and 0.05 ppts. The increases in the remaining sectors had an effect of 0.05 ppts for the CPI of February 2026.

The only decrease was registered in the index for the "Housing" (-0.01%) sector, which contributed with an insignificant effect on the CPI of February 2026.

The increase in the "Recreation and culture" sector was mainly due to an increase of 15.3% in the category "Holidays", which contributed to an effect of 0.29 ppts. The increase in the "Household operation" sector was mainly due to increases in the categories "Household appliances" (3.4%) and "Tools and equipment for house and garden" (8.5%), which contributed to an effect of respectively, 0.08 and 0.07 ppts. The increase in the "Transport" sector was due to increases of 14.0% and 0.8% in the categories "Transport services" and "Operation of personal transport equipment", which each contributed to an effect of 0.06 ppts. The increase in the "Communications" sector was due to an increase in the category "Telephone and telefax equipment" (10.1%), which contributed to an effect of 0.05 ppts. The increase in the "Food and non-alcoholic beverages" sector was due to increases of 1.5% and 0.2% in the categories "Non-alcoholic beverages" and "Food", which each contributed to an effect of 0.02 ppts.

Consumption basket

The consumption basket of the CPI consists of 408 goods and services. Compared to January 2026, 54.7% of these products had an increase in price, causing an effect of 0.98 ppts, while 30.6% showed a decrease, contributing to an effect of -0.35 ppts and the remaining 14.7% had no change in price. Compared to January 2026, the prices of goods (0.5%) and services (0.8%) show increases and contributed with an effect of respectively, 0.29 and 0.34 ppts on the CPI of February 2026.

Core inflation

The CPIC (core inflation) - CPI excluding the effect of energy and food – was 1.0% in February 2026. The energy index - which consists of the products: electricity, water, gasoline and diesel – was -4.0%. The food index showed an increase of 0.5%.

What is CPIC?

The CPIC (core inflation) is a portion of the inflation where certain items, which have volatile price movements, are excluded, such as food products and energy. When calculating the core inflation, the most volatile components are eliminated from the inflation. The core inflation index is used to assess the medium and long-term trends of the general level of prices. For purposes of economic policymaking, especially monetary policy, many economists focus on the proportion of the core inflation, as this allows a more in-depth evaluation of the recent inflation developments in the economy.

The CPIC is calculated by comparing the average index for the most recent 12-month period compared with the preceding 12-month period.

The three main uses of a CPI are:

1. a calculation method to compensate employees due to the loss of purchasing power, adjusting their salaries, with the percentage change rate of the CPI, which is known as indexation.
2. a tool used in National Accounts to adjust components of the gross domestic product (GDP) from nominal terms to real terms. (For example, by eliminating the effect of the price changes from the consumption value)
3. a means commonly used by governments and central banks to set inflation targets.

Subsistence level

The subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14) in February 2026 is Afl. 5,551, an increase of Afl. 22 compared to January 2026 (Afl. 5,529). The subsistence level for a single adult household is Afl. 2,643, an increase of Afl. 10 compared to January 2026 (Afl. 2,633).

What is the Subsistence level and how is it adjusted?

The CBS defines the subsistence level as the minimum level of income that is perceived as necessary for a person or family to be able to function in the society in an adequate and socially acceptable manner. When the definition of subsistence level is used, it refers in reality to a "Social subsistence level" and not the literal definition "the money needed to purchase those goods and services deemed necessary for living a life free of basic deprivation" (United Nations).

A subsistence level index was created by calculating the cost of the essential resources that an average adult consumes during a month. Each month this index is adjusted, based on the prices of food, clothing, shelter, transportation, and other items in the basket.

The current subsistence level is based on the "Subsistence level 2010" report published by the CBS in December 2010, and is updated monthly according to the CPI. The reference unit used in this report is of a household consisting of two adults and two children (aged 0-14). The total weight of such a household is 2.1 (1.0 + 0.5 + 0.3 + 0.3).

The subsistence level in February 2026

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". Equivalent scales are used to adjust the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14). The subsistence level is based on figures of the report "Bestaansminimum 2010" and is monthly updated for inflation using the monthly CPI. The reference unit used in this report is a household consisting of two (2) adults and two (2) children (aged 0-14).

In February 2026 the monthly subsistence level for a household consisted of two (2) adults and two (2) children (aged 0-14) (Afl. 5,551) showed an increase of Afl. 57 compared to February 2025 (Afl. 5,494) and was mainly caused by an increase of Afl. 62 in the sector "Food and non-alcoholic beverages". The largest decrease in February 2026 was registered in the sector "Clothing and footwear" (Afl. -19).

Change in prices of crude oil, utilities, gasoline and diesel in February 2026

The prices of utilities (electricity and water), gasoline and diesel are for the greater part determined by international crude oil prices. In February 2026 the average price per barrel of crude oil (US\$ 64.55) had an increase of US\$ 4.89 (8.2%) compared to January 2026 (US\$ 59.66).

The prices of electricity and water did not change compared to January 2026. Subsequently, the average electricity price per household remained at Afl. 263.67, while the average price of water per household remained at Afl. 168.73.

In February 2026 the price of gasoline registered an increase of Afl. 2.90 cents (1.4%) and had an effect of 0.05 ppts on the CPI. The price of diesel registered an increase of Afl. 4.40 cents (2.3%) and had an effect of 0.01 ppt for the CPI of February 2026.

In February 2026, utilities, gasoline and diesel as a group, showed an increase in price of 0.4% compared to January 2026, and had an effect of 0.06 ppts on the CPI, while the remaining 404 goods and services, as a group, show an increase of 0.7% and had an effect of 0.57 ppts on the CPI.
