November 2024

The Central Bureau of Statistics presents the most important findings for the Consumer Price Index (CPI) for the month of November 2024.

Consumer Price Index for the month of **November 2024**

The CPI for November 2024 (109.25), shows an increase of 0.1% compared to the index of October 2024 (109.19).

The percentage change of the CPI over the last twelve (12) months (November 2023 to November 2024) is 0.8, a decrease of 0.9 percentage points (ppts) compared to the percentage change for the same period of last year (1.7%).

The period average (last 24 months) percentage change of the CPI for the periods November 2022 to November 2023 and November 2023 to November 2024 is 1.9%, a decrease of 1.8 ppts compared to the period average percentage change over the periods November 2021 to November 2022 and November 2022 to November 2023 (3.7%).

During this month, six (6) of the twelve (12) sectors registered increases in prices. The increase that had the greatest influence on the CPI was registered for the "Transport" (2.2%) sector, which contributed with an effect of 0.29 ppts. The increases in the remaining sectors had an effect of 0.20 ppts on the CPI of November 2024.

Aforementioned increases were partially offset mainly by decreases in the indices for the "Housing" (-0.8%) and "Household operation" (-1.6%) sectors, which caused an effect of respectively -0.20 and -0.14 ppts. The decreases in the remaining sectors had an effect of -0.09 ppts on the CPI of November 2024.

The increase in the "Transport" sector was mainly due to an increase of 2.5% in the category "Operation of personal transport equipment", which contributed to an effect of 0.20 ppts.

The decrease in the "Housing" sector was due to a decrease in the category "Electricity, gas and other fuels" (-3.8%), which contributed to an effect of -0.30 ppts. The decrease in the "Household operation" sector was mainly due to a decrease of 6.2% in the category "Household appliances", which contributed to an effect of -0.14 ppts.

Consumption basket

The consumption basket of the CPI consists of 408 goods and services. Compared to October 2024, 43.4% of these products had an increase in price, causing an effect of 1.00 ppt, while 41.2% showed a decrease, contributing to an effect of -0.94 ppts and the remaining 15.4% had no change in price. The prices of goods decreased by 0.4% and caused an influence of -0.23 ppts, while the prices of services increased by 0.7% compared to October 2024 and had an influence of 0.28 ppts on the CPI of November 2024.

Core inflation

The CPIC (core inflation) - CPI excluding the effect of energy and food – was 3.0% in November 2024. The energy index - which consists of the products: electricity, water, gasoline and diesel – was -2.9%. The food index showed an increase of 2.2%.

What is CPIC?

The CPIC (core inflation) is a portion of the inflation where certain items, which have volatile price movements are excluded, such as food products and energy. When calculating the core inflation, the most volatile components are eliminated from the inflation. The core inflation index is used to assess the medium and long-term trends of the general level of prices. For purposes of economic policy-making, especially monetary policy, many economists focus on the proportion of the core inflation, as this allows a more in-depth evaluation of the recent inflation developments in the economy. The annual average of the CPI is used to calculate the CPIC.

The CPIC is calculated by comparing the average index for the most recent 12-month period compared with the preceding 12-month period.

The three main uses of a CPI are:

- a calculation method to compensate employees due to the loss of purchasing power, adjusting their salaries, with the percentage change rate of the CPI, which is known as indexation.
- a tool used in National Accounts to adjust components of the gross domestic product (GDP) from nominal terms to real terms. (For example, by eliminating the effect of the price changes from the consumption value)
- a means commonly used by governments and central banks to set inflation targets.

Subsistence level

The subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-15 years) in November 2024 is Afl. 5,512, a decrease of Afl. 8 compared to October 2024 (Afl. 5,520). The subsistence level for a single adult household is Afl. 2,625, a decrease of Afl. 4 compared to October 2024 (Afl. 2,629).

What is the Subsistence level and how is it adjusted?

The CBS defines the subsistence level as the minimum level of income that is perceived as necessary for a person or family to be able to function in the society in an adequate and socially acceptable manner. When the definition of subsistence level is used, it refers in reality to a "Social subsistence level" and not the literal definition "the money needed to purchase those goods and services deemed necessary for living a life free of basic deprivation" (United Nations).

A subsistence level index was created by calculating the cost of the essential resources that an average adult consumes during a month. Each month this index is adjusted, based on the prices of food, clothing, shelter, transportation, and other items in the basket.

The current subsistence level is based on the "Subsistence level 2010" report published by the CBS in December 2010, and is updated monthly according to the CPI. The reference unit used in this report is of a household consisting of two adults and two children (0 to 14 years). The total weight of such household is 2.1 (1.0 + 0.5 + 0.3 + 0.3).

The subsistence level in November 2024

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". Equivalent scales are used to adjust the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14 years). The subsistence level is based on figures of the report "Bestaansminimum 2010" and is monthly updated for inflation using the monthly CPI. The reference unit used in this report is a household consisting of two (2) adults and two (2) children (aged 0-14 years).

In November 2024 the monthly subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14 years) (Afl. 5,512) showed an increase of Afl. 65 compared to November 2023 (Afl. 5,447) and was mainly caused by an increase of Afl. 62 in the sector "Food and non-alcoholic beverages". The largest decrease in November 2024 was registered in the sector "Housing" (Afl. - 12).
