Onderwerp	Registratienummer	Datum
Analyse impact teeltvrije zones volgens 7e Nitraatactieprogramma in KRW-gebieden van HHNK	22.0314784	28 maart 2022

Inleiding

In de plannen voor het 7e Nitraatactieprogramma (NAP) heeft het ministerie van LNV onder andere als maatregel de verplichting van teeltvrije zones op landbouwgronden opgenomen[1]. In deze teeltvrije zones vindt geen bemesting en geen toepassing van gewasbeschermingsmiddelen plaats, waardoor de afspoeling van o.a. nutriënten naar het oppervlaktewater wordt beperkt. Deze zones dragen zo bij aan een betere kwaliteit van het oppervlaktewater.

Bij deze maatregel is aangegeven dat waterbeheerders de mogelijkheid krijgen om aan te geven op welke locaties een smallere teeltvrije zone voldoet, omdat zij het beste inzicht hebben waar teeltvrije zones effectief zijn. Hiervoor wordt een wetenschappelijk onderbouwde leidraad opgesteld. Dit leidt nu al tot vragen uit de agrarische sector. We willen meer zicht krijgen op de uitwerking van de maatregel in het beheergebied van HHNK en de relatie met de verbetering van de waterkwaliteit.

Dit is met een GIS-analyse voor KRW-gebieden binnen het beheergebied van HHNK onderzocht.

Belangrijkste conclusie

Het blijkt dat in de praktijk de voorgestelde bredere teeltvrije zones niet realiseerbaar zijn in grote delen van gebieden met veel water (en veel sloten). Hierdoor zal de bijdrage aan de verbetering van

---

de waterkwaliteit in deze gebieden beperkt blijven. Afhankelijk van de verdere uitwerking, lijken de voorstellen voor teeltvrije zones niet overal praktisch toepasbaar en controleerbaar.

Huidige richtlijnen teeltvrije zones

Op dit moment gelden de richtlijnen voor teeltvrije zones uit het Activiteitenbesluit milieubeheer[2] bij het toepassen van meststoffen en gewasbeschermingsmiddelen naast oppervlaktewater. De voorgeschreven teeltvrije zone is voor gewasbeschermingsmiddelen afhankelijk van het gewas en voor meststoffen is daarnaast ook van de ligging van het perceel van invloed. Een teeltvrije zone is een strook land naast oppervlaktewater die niet mag worden bespoten of bemest (in de meeste gevallen). Deze zones mogen ook niet worden gebruikt voor het telen van een gewas, behalve bij grasland. Het bevoegd gezag kan een afwijkende breedte van teeltvrije zones toestaan. In het beheergebied van HHNK is hier geen gebruik van gemaakt.

Voorgestelde teeltvrije zones

In het *Ontwerp 7e actieprogramma Nitraatrichtlijn* zijn volgende richtlijnen[3] voorgesteld voor teeltvrije zones:

- Een teeltvrije zone van 5 meter langs ecologisch kwetsbare waterlopen of KRW-waterlichamen;
- Een teeltvrije zone van 2 meter langs overige watervoerende wateren;
- Voor deze zones geldt een maximum van 5% van het areaal van een perceel (5%-norm).

In de brief aan de Tweede Kamer[1] zijn als uitzonderingen genoemd:

- Wateren waar de waterkwaliteit al voldoet;
- Bij grasland kan een teeltvrije zone van 1 meter (in plaats van 2 meter) worden gehanteerd, indien deze zone uit kruidenrijk grasland bestaat en de waterkwaliteit voldoet (behalve bij KRW-waterlichamen en ecologisch kwetsbare waterlopen).

Zoals eerder aangegeven, krijgen waterbeheerders de mogelijkheid om aan te geven op welke locaties een smallere teeltvrije zone volstaat. Als minimum breedte geldt de huidige teeltvrije zone zoals opgenomen in het Activiteitenbesluit milieubeheer (2021).

Impact ontwerp 7e NAP voor KRW-gebieden

In het beheergebied van HHNK is zeer veel water in het landelijk gebied. Een groot deel van de agrarische percelen grenst met één of meerdere zijden aan oppervlaktewater. Het beheergebied van HHNK is opgedeeld in 51 KRW-gebieden. Hierbinnen zijn twee categorieën onderscheiden:

- Gebieden waar al het water behoort tot het waterlichaam: deze gebieden worden aangeduid als 'waterrijk';
- Gebieden waar een stukje van de hoofdwaterloop behoort tot het KRW-waterlichaam: deze gebieden worden aangeduid als 'waterdelen'.

---

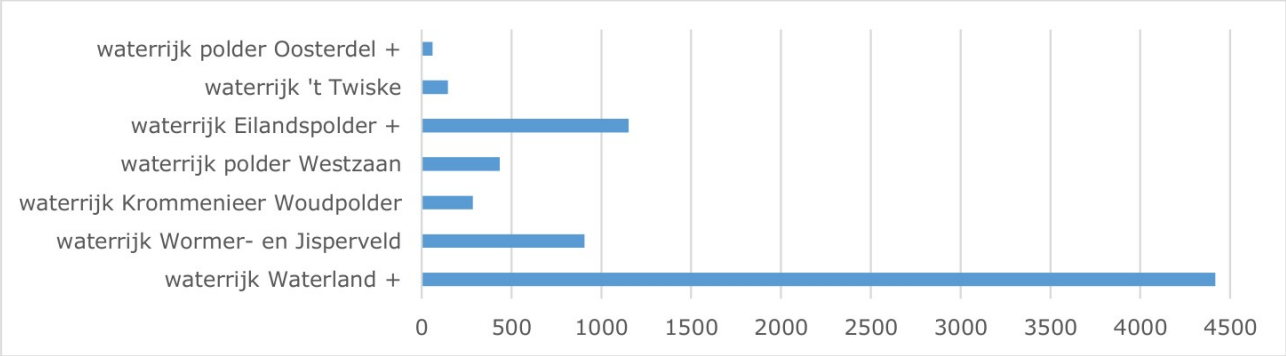
[2] *Meststoffen en gewasbeschermingsmiddelen gebruik bij oppervlaktewater - Kenniscentrum InfoMil*

[3] *Ontwerp 7e actieprogramma Nitraatrichtlijn (blz. 71)*

Er zijn vier KRW-gebieden waar geen agrarisch gebruik is: Geestmerambacht, Alkmaardermeer, Heerhugowaard Stad van de Zon en Amstelmeer. Deze gebieden zijn buiten beschouwing gelaten in deze analyse. Van de overige 47 gebieden zijn er 7 gebieden 'waterrijk' en 40 gebieden 'waterdelen'.

Gebieden 'waterrijk'

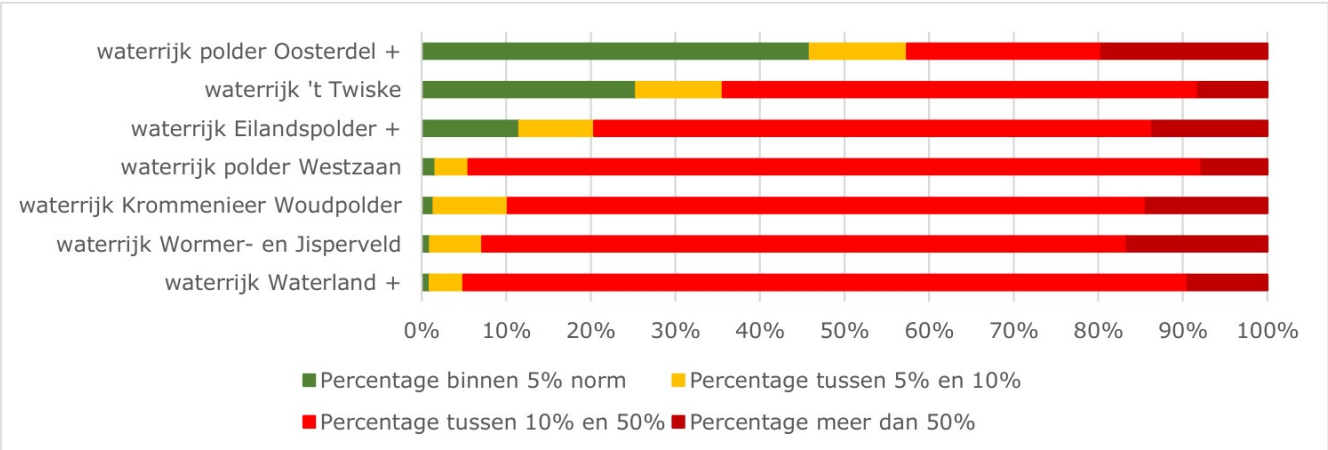
Er is een grote variatie in het aantal agrarische percelen per waterrijk gebied (zie Figuur 1).



Figuur 1. Aantal percelen in de KRW-gebieden 'waterrijk'

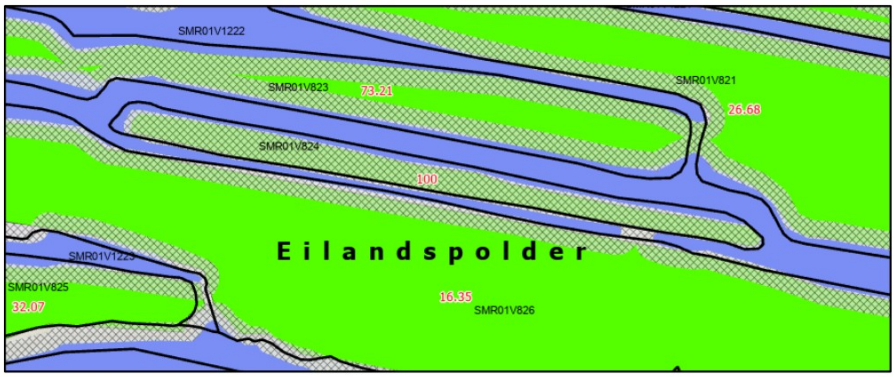
Het aantal agrarische percelen is het kleinst in de polder Oosterdel (61 percelen), gevolgd door waterrijk 't Twiske (146) (zie ook Bijlage 1 Kaart 1 en Kaart 2). In de overige waterrijke gebieden met meer agrarische percelen, bestaan deze grotendeels uit agrarisch grasland (zie Bijlage 1 Kaart 3 t/m Kaart 7b).

De teeltvrije zone volgens het 7^{e} NAP in de KRW-gebieden 'waterrijk' is idealiter langs alle waterlopen 5 meter breed. De waterrijke gebieden bestaan voor een groot deel uit smalle agrarische percelen, waardoor de voorgestelde teeltvrije zones de norm van 5% van het perceelsoppervlak op een groot deel van de percelen overschrijden (zie Figuur 2).



Figuur 2. Impact voorgestelde teeltvrije zones op percentage van agrarische percelen (beslag op oppervlakte van het perceel) voor KRW-gebieden 'waterrijk'

In de waterrijke gebied met veel grasland zijn meerdere percelen zo smal, dat ze voor 100% binnen de teeltvrije zone vallen (zie voorbeeld in Figuur 3).

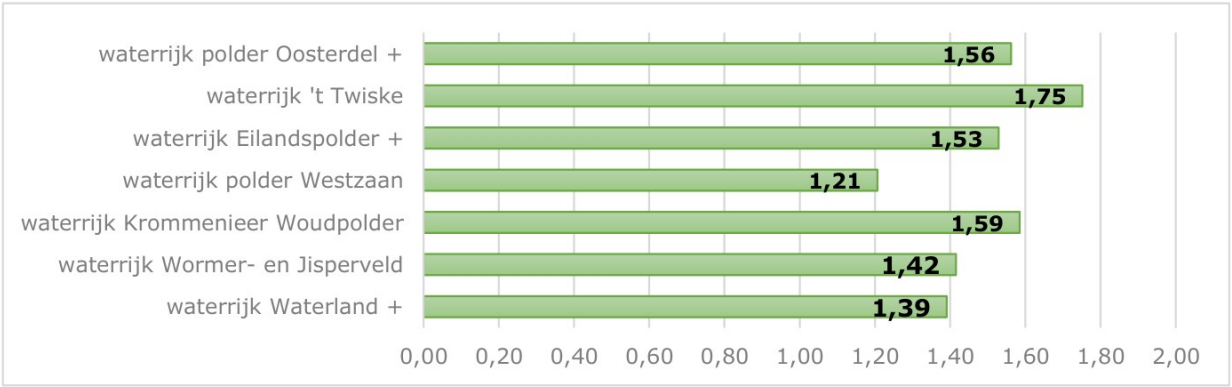


Figuur 3. Voorbeeld van impact van 5 m brede teeltvrije zones (gearceerde gebieden) op agrarische percelen in de Eilandspolder (de rode cijfers geven het percentage van het agrarisch perceel binnen de teeltvrije zone weer)

Uit de analyse voor deze gebieden blijkt:

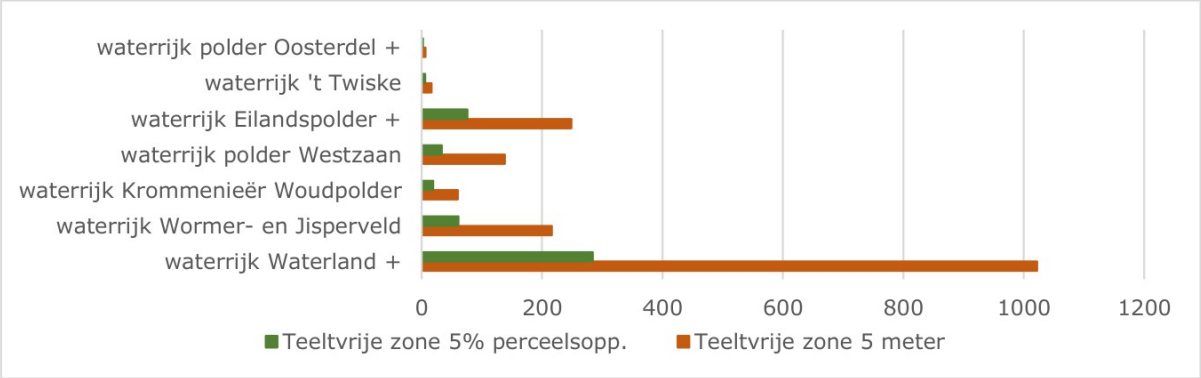
- In alle waterrijke gebieden is het percentage agrarische percelen, waar de voorgesteld buffers aan de 5%-norm (beslag op perceelsoppervlak) voldoen lager dan 50% (zie Figuur 1);
- Het percentage agrarische percelen met een teeltvrije zone binnen de 5%-norm varieert van <1% voor waterrijk Waterland en waterrijk Wormer- en Jisperveld tot 45,9% voor waterrijk polder Oosterdel (zie Figuur 1);
- Wanneer het ruimtebeslag van voorgestelde teeltvrije zones wordt berekend over het gebied als geheel, wordt in alle zeven waterrijke gebieden de norm van 5% van de totale oppervlakte agrarische grond overschreden. Dit varieert tussen de 14,3% (waterrijk 't Twiske) en 20,7% (waterrijk polder Westzaan).

Als wordt uitgegaan van teeltvrije zones die maximaal 5% van het oppervlakte van de agrarische percelen in beslag nemen (5%-norm), leidt dat in de waterrijke gebieden tot een gemiddelde teeltvrije zone tussen 1,2 meter (waterrijk polder Westzaan) en 1,75 meter (waterrijk 't Twiske) (zie Figuur 4).



Figuur 4. Gemiddelde teeltvrije zone (in meters) in waterrijke gebieden op basis van 5%-norm

In Figuur 5 is het totale oppervlakte van de teeltvrije zones per gebied weergegeven op basis van de 5%-norm en op basis van de 5 meter, zoals volgens het 7e NAP. De zones volgens de 5%-norm beslaan in alle waterrijke gebieden een aanzienlijk kleiner oppervlak.



Figuur 5. Totale oppervlakte (ha) teeltvrije zone in waterrijke gebieden op basis van 5%-norm en op basis van 5 meter zone

De conclusies voor de waterrijke gebieden zijn:

- Het instellen van teeltvrije zones van 5 meter is op een groot deel van de agrarische percelen niet haalbaar binnen de 5%-norm. De oppervlakte teeltvrijgebied langs water, zal hierdoor in deze gebieden maar in beperkte mate toenemen.
- Het gebruik als agrarisch grasland komt in deze gebieden het meest voor. In vergelijking met de huidige richtlijnen volgens het Activiteiten besluit milieubeheer is er afhankelijk van het gewas wel sprake van een toename van de teeltvrije zone (nu minimaal 50 cm), maar dit blijft gemiddeld ver beneden de 5 meter (1,2 tot 1,75 meter).

Gebieden 'waterdelen'

Er is een grote variatie in het aantal agrarische percelen in de gebieden 'waterdelen' (zie Figuur 6). De KRW-gebieden in de duinen hebben de minste agrarische percelen (variërend van 11 in Westerduinen/PWN tot 83 in Duingebied Texel).

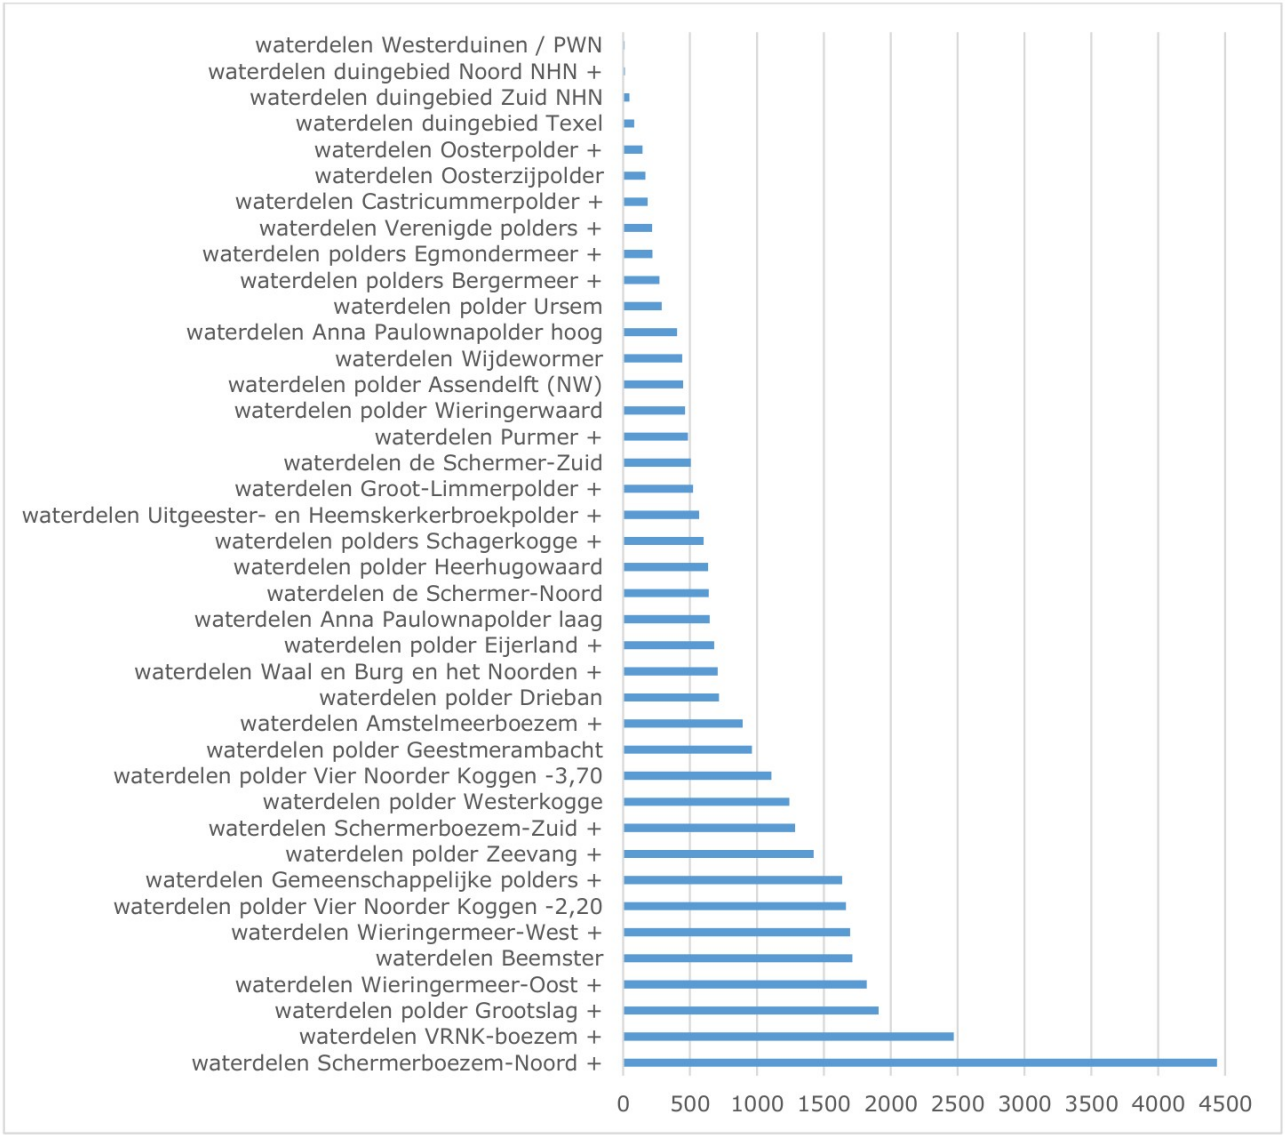
In de KRW-gebieden 'waterdelen' worden volgens het 7e NAP teeltvrije zones van 5 meter (langs KRW-waterlichamen) en van 2 meter (langs overige wateren) toegepast. In deze gebieden zijn er percelen met verschillende situatie wat betreft teeltvrije zones langs water: 1) alleen zones van 2 meter, 2) alleen zones van 5 meter, 3) een combitatie van zones van 2 meter en 5 meter. Daarnaast zijn er in een aantal gebieden ook enkele percelen, die niet aan water grenzen en waar geen voorgeschreven teeltvrije zone vanuit het 7e NAP geldt.

Figuur 7 toont het beslag van de teeltvrije zones op het perceelsoppervlakte in de gebieden 'waterdelen', zonder rekening te houden met de 5%-norm. Uit de analyse blijkt:

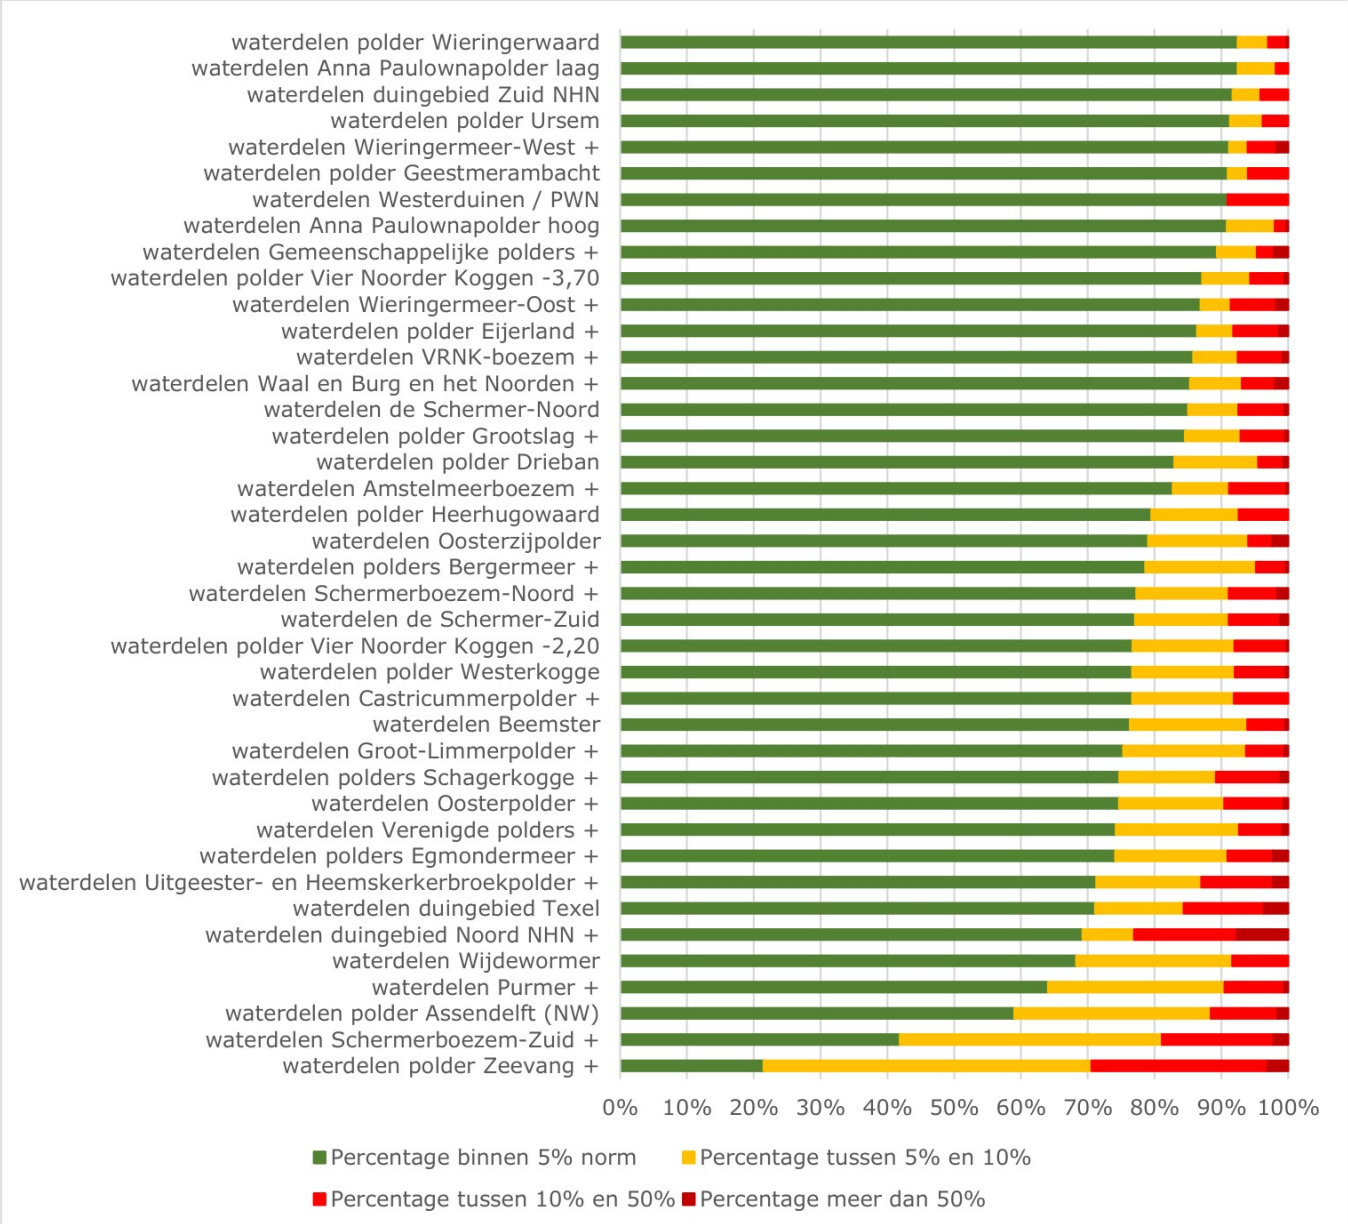
- Van de 40 gebieden 'waterdelen' met agrarische percelen zijn er twee, waar de teeltvrije zones op minder dan 50% van de percelen binnen de 5%-norm vallen: waterdelen polder Zeevang en waterdelen Schermerboezem-Zuid. Dit zijn gebieden, waar het agrarisch gebruik grotendeels uit grasland bestaat (zie Bijlage 2 Kaart 1 en 2a + 2b). Datzelfde geldt ook voor waterdelen polder

Assendelft en waterdelen Purmer, met percentages van respectievelijk 59 en 64% van de percelen met teeltvrije zones binnen de 5%-norm;

- Het ruimtebeslag van de teeltvrije zones volgens het 7e NAP - gerekend over het hele agrarische gebied per KRW-gebied – varieert tussen 0,4% (waterdelen Westerduinen / PWN) en 7,3% (waterdelen polder Zeevang);
- In 36 gebieden vallen de voorgestelde teeltvrije zones op meer dan 66% van de locaties binnen de 5%-norm;
- Het percentage percelen met een teeltvrije zone binnen de 5%-norm varieert tussen de 21,5% (Polder Zeevang) en 92,5% (waterdelen polder Wieringerwaard);
- De polders met een groot gedeelte van de teeltvrije zones binnen de 5%-norm, hebben meer akkerbouw, bloembollen en/of overige gewassen en een geringer aandeel agrarisch grasland (zie Bijlage 2 Kaart 3 en 4).

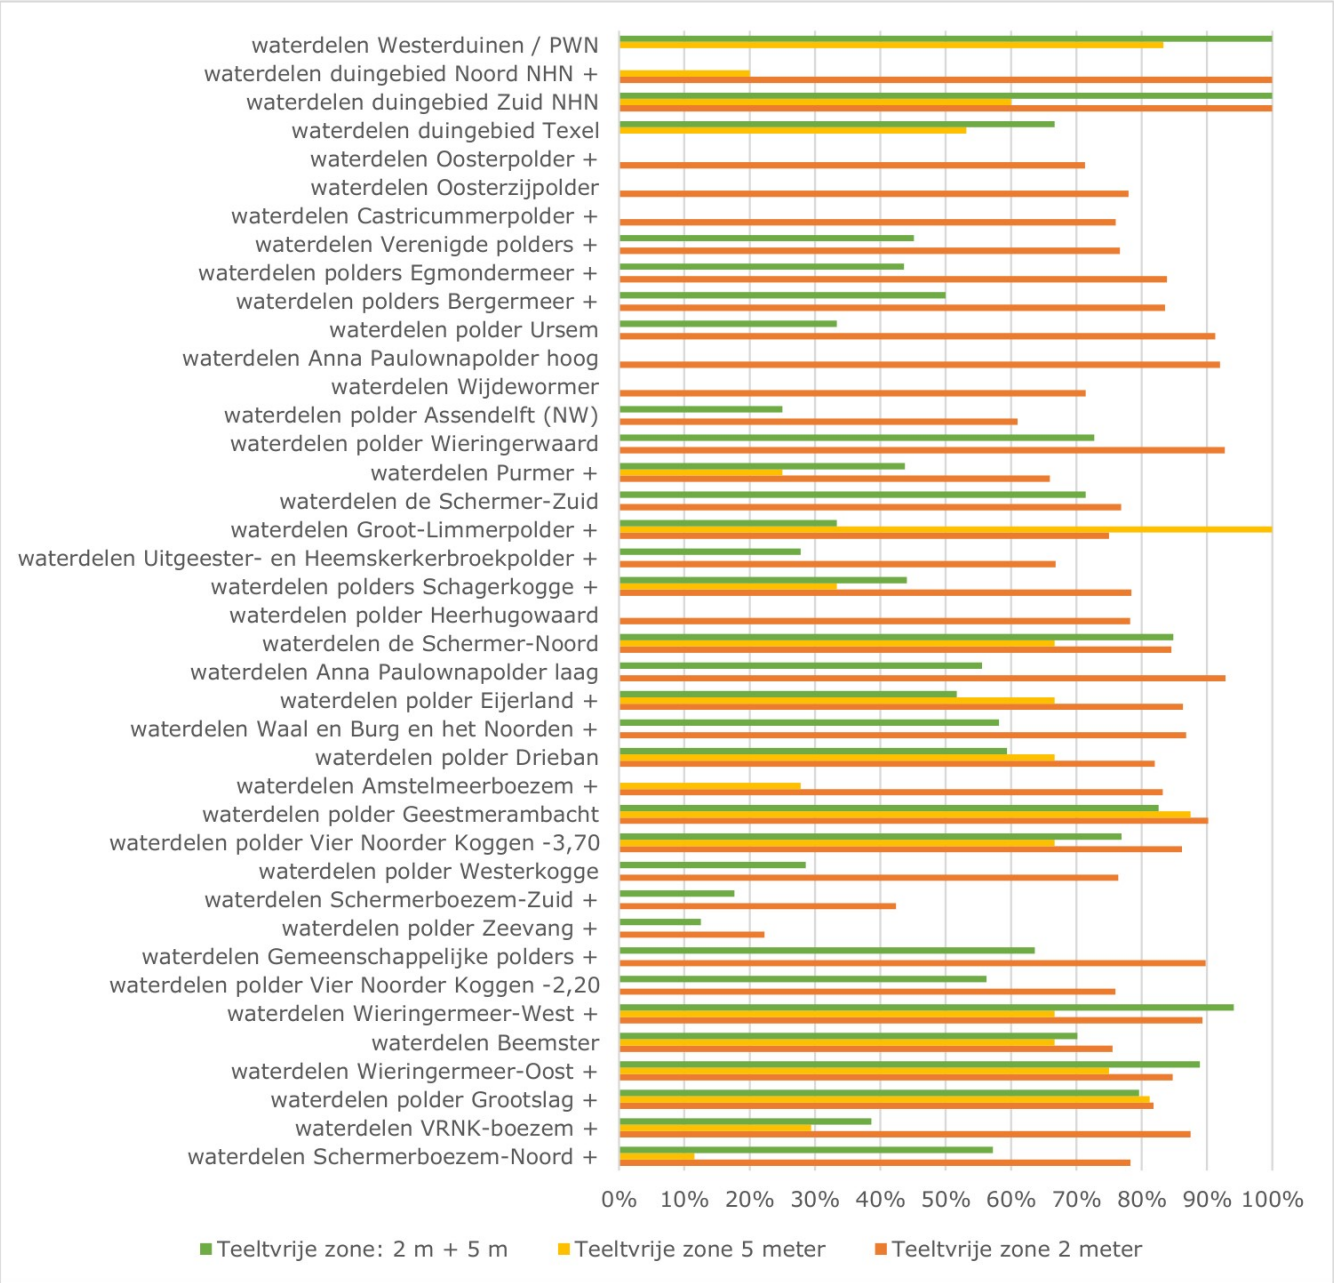


Figuur 6. Aantal percelen in de KRW-gebieden 'waterdelen'



Figuur 7. Impact voorgestelde teeltvrije zones op percentage van agrarische percelen (beslag op oppervlakte van het perceel) voor KRW-gebieden 'waterdelen'

Voor de onderverdeling van percelen waar 1) alleen teeltvrije zones van 2 meter gelden, 2) alleen zones van 5 meter gelden of 3) een combinatie van 2 meter en 5 meter zones van toepassing is, is berekend waar dit binnen de 5%-norm gerealiseerd kan worden. Figuur 8 geeft weer welk percentage van de percelen per categorie aan de norm voldoet en waar dus de voorgestelde teeltvrije zones volgens deze norm toegepast kunnen worden.



Figuur 8. Percentage percelen per gebied 'waterdelen', waar voorgestelde teeltvrije zone binnen de 5%-norm vallen – voor verschillende situaties van teeltvrije zones

Hieruit blijkt:

- 2 meter brede zones zijn in 35 van de gebieden op meer dan 66% van de locaties mogelijk binnen de 5%-norm;
- 5 meter brede zones zijn in 11 van de gebieden op meer dan 66% van de locaties mogelijk binnen de 5%-norm;

- Percelen met een combinatie van teeltvrije zones van 2 meter en 5 meter, zijn in 12 gebieden op meer dan 66% van de locaties realiseerbaar.

Er zijn in alle gebieden waterdelen dus ook percelen, waar de voorgestelde zones niet volgens de norm mogelijk zijn

Conclusies

De voorstellen voor teeltvrije zones in het 7e NAP zijn ingrijpend. Uit deze analyse voor het beheergebied van HHNK (met veel oppervlaktewater), blijkt echter dat de zones in de praktijk lang niet overal toepasbaar zijn binnen de 5%-norm (van het perceelsoppervlakte). De teeltvrije zones zullen in bepaalde KRW-gebieden slechts beperkt worden verbreed, waardoor de bijdrage aan verbetering van de waterkwaliteit beperkt blijft. Hier zullen andere maatregelen nodig zijn om de waterkwaliteit te verbeteren.

KRW-gebieden 'waterrijk'

In de waterrijke gebieden geldt volgens het 7e NAP een teeltvrije zone van 5 meter langs het (KRW-) water. In al deze gebieden is het percentage percelen, waar de voorgestelde teeltvrije zones aan de 5%-norm voldoen lager dan 50%. In vijf gebieden is dit minder dan 20%. Teeltvrije zones van 5 meter zullen in de praktijk op een beperkt gedeelte van de percelen binnen de 5%-norm toegepast kunnen worden. Op meer dan de helft van de percelen in deze gebieden is een 5 meter brede zone dus niet realiseerbaar.

Als de richtlijn zou zijn om 5% van het perceelsoppervlakte langs KRW-water te beschouwen als teeltvrije zone, zou dat in deze gebieden gemiddeld resulteren in een teeltvrije zone tussen de 1,2 en 1,75 meter. Op percelen waar de teeltvrije zone volgens het huidige Activiteitenbesluit minder breed is (afhankelijk van het gewas) zal dat tot een verbreding van de teeltvrije zones leiden. Voor een gedeelte van de percelen zal er geen verandering zijn in de teeltvrije zone. Hier blijven minimaal de teeltvrije zones gelden uit het Activiteitenbesluit milieubeheer.

Er is een groot verschil tussen de voorgestelde teeltvrije zone van 5 meter en de haalbare zones in de praktijk.

KWR-gebieden 'waterdelen'

In de gebieden 'waterdelen' zijn volgens het 7e NAP zowel zones van 2 meter (langs overige wateren) en zones van 5 meter (langs KRW-water) voorgeschreven.

De voorgestelde teeltvrije zones in de gebieden 'waterdelen' vallen in 36 gebieden voor 66% binnen de 5%'-norm. Vooral de zones van 2 meter zijn op veel locaties mogelijk binnen 5% van het perceelsoppervlakte.

Voor de overige vier gebieden varieert het percentage percelen dat binnen de 5%-norm valt, tussen de 21 en 64%. In deze gebieden is het landgebruik voornamelijk agrarisch grasland.

De polders met een groot gedeelte van de teeltvrije zones binnen de 5%-norm, hebben meer akkerbouw, bloembollen en/of overige gewassen en een geringer aandeel agrarisch grasland.

Ook in de gebieden 'waterdelen' geldt dus voor een gedeelte van de percelen (variërend van 7,5% tot 78,5%) dat de voorgestelde teeltvrije zones niet binnen de 5%-norm vallen. Ook teeltvrije zones van 2 meter overschrijden in sommige gebieden de 5%-norm.

Discussie

Het is afhankelijk van de praktische uitwerking van het 7e NAP en de wetenschappelijk onderbouwde leidraad die momenteel wordt opgesteld, welke zones in de praktijk gehanteerd gaan worden voor percelen waar de 5%-norm wordt overschreden.

Als de huidige zones volgens het Activiteitenbesluit blijven gelden, is er op deze percelen geen toename van het teeltvrije oppervlakte. Er zal dan geen sprake zijn van een extra bijdrage aan de verbetering van de waterkwaliteit.

Theoretisch is het mogelijk om de teeltvrije zones op basis van de 5%-norm per perceel te bepalen. Het is wel de vraag hoe het praktisch toepasbaar en controleerbaar is, als dit per perceel gaat variëren. Vooral in de waterrijke gebieden betreft dit (mogelijk maatwerk) het grootste gedeelte van de percelen.

Er is gesteld dat waterbeheerders de mogelijkheid krijgen om aan te geven op welke locaties een smallere teeltvrije zone voldoet. De wetenschappelijke leidraad om hierbij te ondersteunen is nog niet beschikbaar.

Gezien de opgaven die er zijn vanuit de KRW om de waterkwaliteit te verbeteren, is het wenselijk om te komen tot een aanpak die praktisch uitvoerbaar is en ook een daadwerkelijke bijdrage levert.

Met vriendelijke groet,

[redacted]

Verslag werkgroep 4 september 2023

<u>Opties voor maatregelen fosfor</u>

- Mogelijke optie kan worden dat gebieden afzonderlijk worden aangewezen voor stikstof en fosfor (of voor beide). Met het oog daarom worden suggesties gevraagd voor fosformaatregelen:
    - LNV geeft aan dat een mogelijke optie is om de fosfaatgebruiksnorm te verlagen. Dit vergt een aanpassing van de Meststoffenwet, neemt langere tijd in beslag.
    - Andere opties:
        - Uitmijnen: meer fosfaat onttrekken dan opbrengen.
        - Bufferstroken gericht uitmijnen: hierop andere gewassen telen, diepwortelende gewassen, olifantsgras, smalle weegbree.
        - Emissiebeperkende maatregelen: infiltratiezones aanleggen, greppeltjes/water op het perceel houden door uitloop parallel langs de sloot, dammetjes in de ruggenteelt, richels parallel aan de helling.
        - Kruidenmengsels telen die fosfaat opnemen.
        - Fosfaat opvangen met ijzerdrains of een ijzeren zandbed/gebruik ijzerhoudend zand (ijzerpallets).
        - Voorkomen afkalving oevers door afrasteren kanten, vee uit oeverzones, stimuleren van drinkbakken, stabiliseren slootkant (met schotjes?).
        - Inlaat wateren van polders defosfateren.
        - Bufferstroken zijn effectief, maar doordat de 4% terugvalregel veel wordt toegepast in sommige gebieden zijn ze niet effectief genoeg.
    - Er wordt aangegeven dat vooral oppervlakkige afspoeling de bron van fosfor is en het niet via de drains lijkt te worden afgevoerd. Ook komt er fosfor vrij door het woelen van de waterbodem in de sloten.
    - Er wordt gesuggereerd de BOOT-lijst van DAW te raadplegen. En mogelijk een opdracht bij WUR neerleggen.

Aantekeningen [redacted] 4-9-23

Apart maatregelen bedenken voor fosfor en nitraat. Gebruiksnorm omlaag duurt lang.
[redacted] uitmijnen. Meer fosfaat onttrekken (op grotere diepte) langs watergangen. Bufferstroken > ander gewas die dieper wortelt. Olifantsgras.
[redacted] emissiebeperkende maatregelen: langs perceelsranden, oppervlakkige afspoeling tegengaan, infiltratiezones. Kruidenmengsels specifiek fosfaat bindend. Niet op gebruiksnorm. Bredere bufferstroken met greppels kan.
[redacted] terecht focus op rand. Ijzeroxide drains fosfor. Ijzerzandbed opvangen.
[redacted] WUR suggesties vragen? Fosfaat vooral door oppervlakkige afspoeling door vastedeeltjes. Weinig fosfor in drainwater. Geulen bij wateroverlast. Parallel aan de sloot greppel: opvang zodat vaste deeltjes kunnen bezinken. Wil HHNK verder verkennen.
[redacted] langs de randen, let op gebiedskenmerken: op de flanken afspoeling. Doe dan iets op de stroken/landschapselementen. Ruggetjes om vaste deeltjes van te houden.
[redacted] kijk naar bootlijst > en kijk naar grondsoort. > stuurt [redacted] met bronnen op.
4% terugval. Bufferstroken worden dusdanig smal > weinig verbetering.
Eke: voorkom afkalven van slootkanten (met name veenweide). [redacted] Is belangrijk. Kan door vee komen (drinkbakken stimuleren of afrasteren) afkalven kan ook door watervogels/dieren of wind. Oeverafkalving voorkomen.
[redacted] ijzerhoudend zand kan ook bij inlaten gebruikt worden. Te weinig voorradig als heel NL dit gaat doen. HHNK doet experiment: ijzerpellet (korrels) uit drinkwater > daar water door laten leiden. Defosforteren van inlaatwater.
